Decker Electric

Progress
Southwire

On October 26th and 27th, five Decker employees attended the Southwire Experience training in Carrolton, GA. Jason Seiwert, Brian Fair, Clint Townsend, Tyler Helget and Doug Lazarus toured four facilities and had hands-on experience with Southwire tools and products.

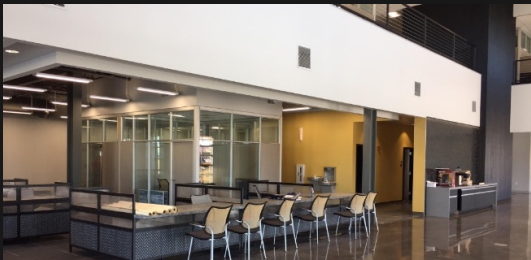

Through the tours of the four different facilities, trainees learned how raw copper is melted into strands of copper rod and then into copper rod, then actual wire. The reel factory is a joint project between Southwire and two area high schools. At-risk students can enter a work-study program to attend high school and make the wire into reels. The graduation rate for these students has gone from 65% to 86% since the start of the program. The final tour was of the main conduit plant.

On Friday, the trainees, in addition to other contractors and distributors from the Midwest, worked in the working lab that Southwire built specifically for demonstration purposes. They worked on wire-pulling methods, pipe bending, wire estimating and safety.

Thank you to Southwire for a great training experience!

Progress

Foley Equipment 1550 Project

After seventeen months, the Foley 1550 Project is complete. The project included the Return-to-Rent and Parts and Service buildings. Foley employees moved into the new buildings on October 16th. Decker Electric would like to thank Conco Construction and Foley Equipment for everyone's hard work and determination in making this project such a success. Decker is excited to celebrate the grand opening with Foley Equipment on November 17th.

Staff
Notable Work Anniversary

A big thank you and congratulations to Elton Fritch for **5 years** at Decker Electric.
