## Project Progress

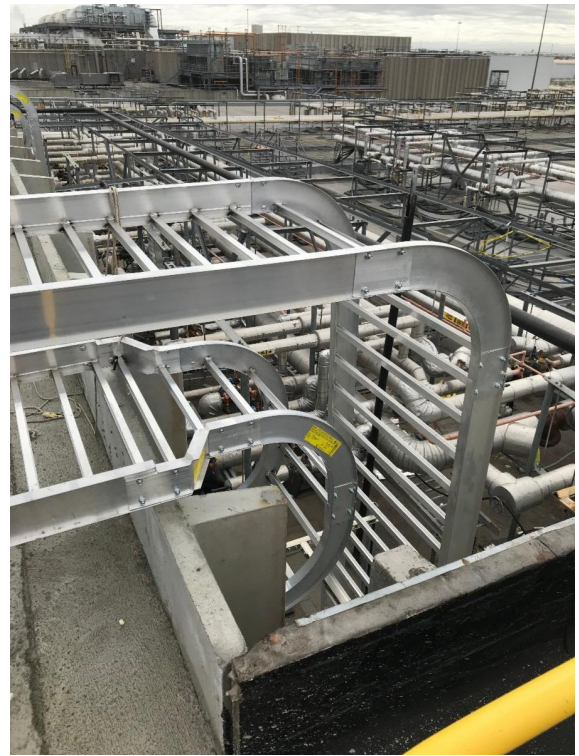

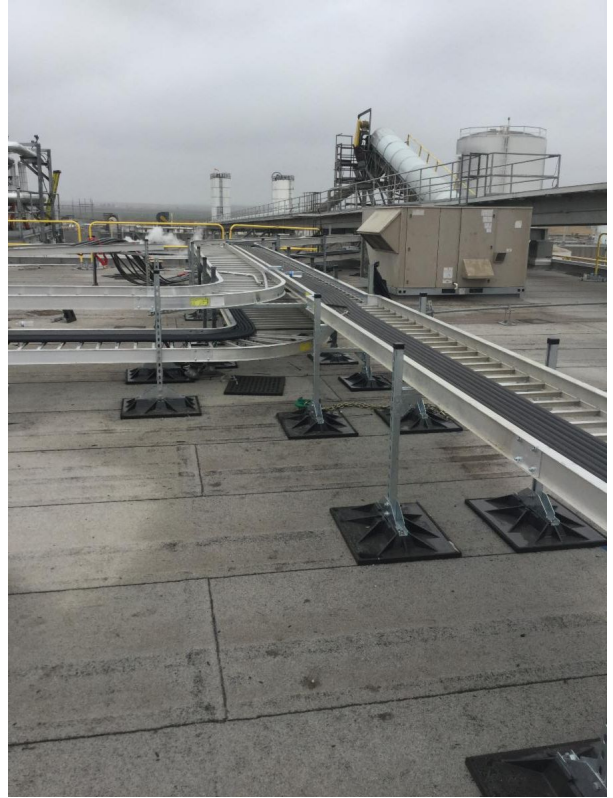

### UPRR Oakland CA

Bryan Wallace and Trent Potter are doing a fantastic job at continuing the UPRR Oakland project for Union Pacific Railroad. Mesa Line Services, out of Alvin, TX, are assisting in installing a new utility pole with some overhead line work as well. This project is being managed by Jason Seiwert and Tyler Helget.

### Tyson Holcomb Update

Thousands of feet of new cable tray have been installed to feed the rebuilt and expanded MCC rooms that were burned up in the fire on August 9th. Decker Electric is refeeding all of the MCC's with several miles of new 750 MCM cable. Wire pulling and terminations have begun and will continue throughout multiple areas of the plant. Thanks to Javier and his entire crew for the long hours and excellent workmanship being done throughout this entire project.

---

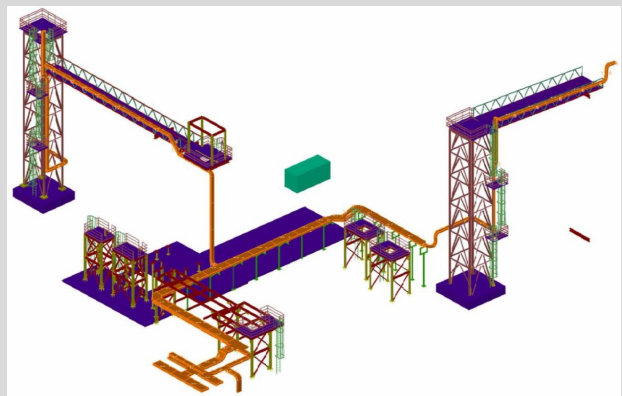

## Commerce Bank

Our team replaced 70 lights at the Waterfront Commerce with LED.

## 3D Modeling

3D modeling is becoming a common place in the construction industry. Decker Electric is not to be left behind in utilizing the latest in Autodesk software to help put together 3D models for conceptual layout for estimating and construction. Decker is implementing the best software tools to assist in Estimating, Project Management, Labor management and Design. As we all know a picture is worth a 1000 words, now the project leads in the field can see routing and conflicts in 3D much like the routing of the cable tray at the LNC plant in Quanah TX.

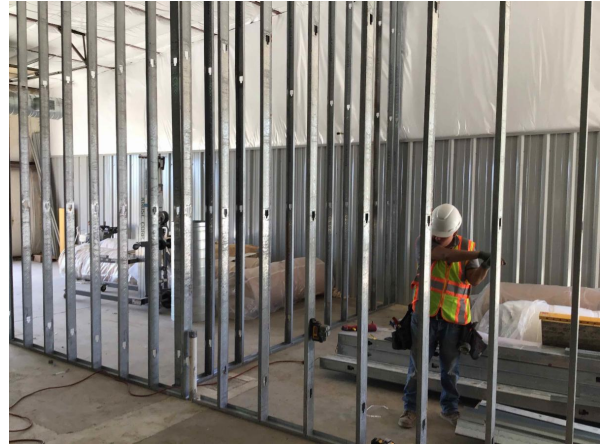

## NNG Cunningham

James Eck is leading the crew out at the NNG Cunningham, KS Project. Below grade underground work is approximately 90% complete and above ground conduit and wire pulling is picking up with 3 crews alongside our mechanical subcontractor Piping & Equipment. Decker Electric has completed (9) of the (47) sites. Decker Electric, ICM and P&E are on pace to finish this project in 2019. Thank you all for all of your hard work, long hours and dedication to this successful project!

# Beggs Laboratory

Seaton Construction Group and Decker Electric are making good progress on the fast paced Beggs Laboratory Project located in Beggs, OK. Chris Brewer is leading the crew with an anticipated schedule completion date of late November.
